--

MOTION/RECOMMENDATION:

Approve and accept the Seminole County Economic Development Strategy Update and Executive Summary to guide the Economic Development program initiatives and include the update in the economic development element of Vision 2020.

BACKGROUND:

The Economic Development Office, in conjunction with Glatting - Jackson Inc., has updated the Economic Development Strategy. The strategy is consistent with the County's Vision 2020 comprehensive plan. The Economic Development goals are explained in detail which are; to continue to create a great place to live, build a strong business environment, and communicate the Seminole County opportunity to target businesses. The strategy includes 13 strategic goals each containing specific actions and performance measures to guide future efforts of the County's economic development program. The strategy supports a "target" approach to support the goals. The "target" approach includes target industries, target occupations, and target areas. The strategy will assist the Economic Development Office in recruiting high wage jobs and growing businesses into Seminole County. This in turn will increase our commercial tax base.

Seminole County Economic Development Strategy Executive Summary 2003

Since the 1950s, Seminole County has been one of the fastest growing communities in Florida. By the County's centennial celebration in 2013, Seminole County is projected to be home to over 500,000 residents. Most of the current residents, and those who will move here in the future, all want the same thing, a desirable quality of life. Seminole County, through a series of actions, has been able to sustain a high quality of life for its residents throughout the past decade and created a destination of choice for both people and business.

The Seminole statistics speak volumes to the effectiveness of the various programs and initiatives undertaken by Seminole County government and their respective partners.

- Top 100 school district as ranked by Money Magazine
- The second highest household income in Florida
- The third most active international airport in Florida
- A local job incentive grant program which has assisted 21 companies create 9114 jobs
- Fast track permitting
- Model parks and trail system
- Property values which have increased by 32% during the past decade
- Forty percent growth in per capita payroll, highest in Orlando MSA
- Largest gain in primary jobs post 9/11 period, 1445, highest in Orlando MSA
- Seminole County bond rating consistently highest in the region
- Gained in commercial / industrial assessed property values over past decade while MSA declined overall

The list of accomplishments which can be attributed to Seminole County goes on and on and clearly places Seminole in a class by itself within the Orlando MSA, if not the State. However, being on top of the mountain is one thing, staying there is quite another. What must Seminole County do to sustain the vision and maintain the momentum to keep itself as the regional "leader of the pack"? Certainly one of the actions is the update to the County's Economic Development Strategy which was originally created in 1993. By all measures, the economic development efforts of the '90s have been successful but are the goals and objectives established at the outset enough to continue the success in the future?

The County's initial '91 goals, contained in the County's comprehensive plan, focused on strengthening and recession-proofing the economy of Seminole through business diversification, attraction of higher waged jobs and the expansion of the non-residential portion of the tax base. In 1993, when the economic development program was formally established, a tactical targeted

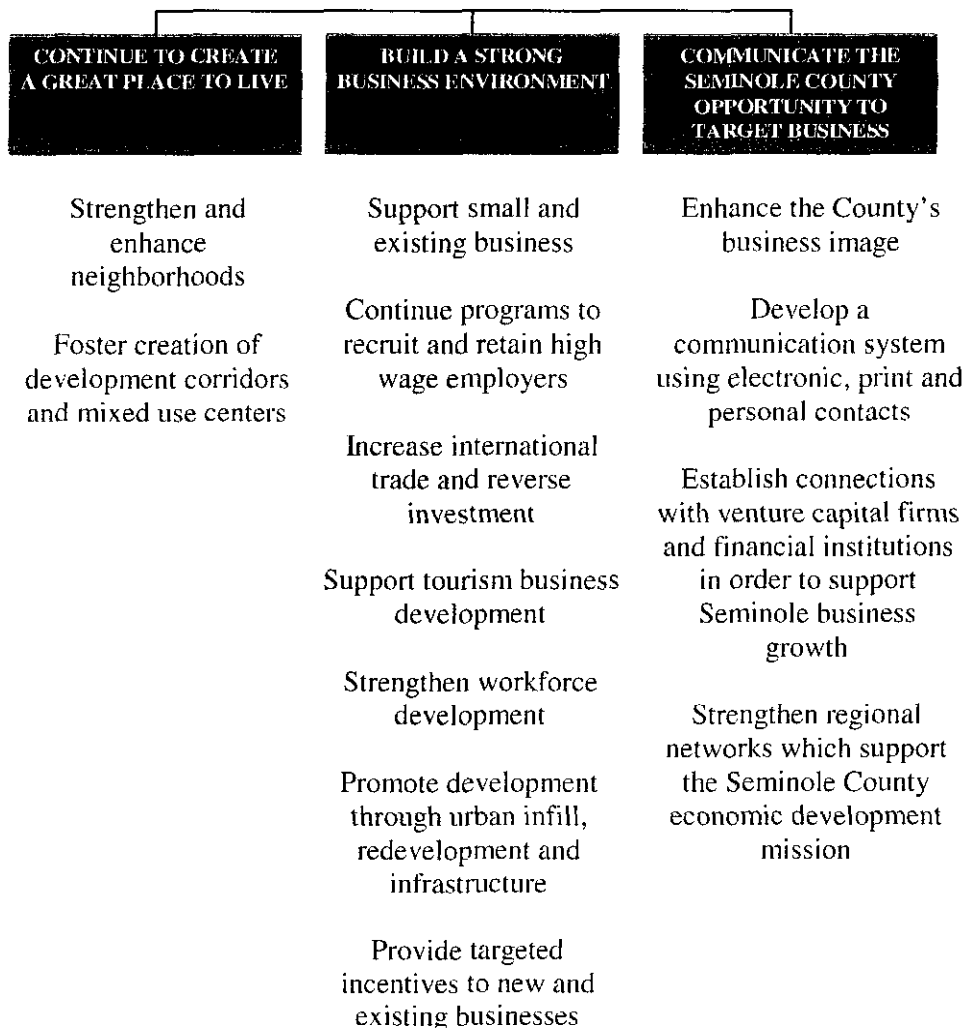

approach was adopted which identified both types of businesses and locations within the County which offered the best opportunities for Seminole County to achieve its overall goals. In '95 the Job Growth Incentive Program was added to provide a tool to leverage those opportunities.

The overall goals established in '91 by Seminole County remain today the correct emphasis for the County to pursue. They remain consistent with Seminole Vision 2020, the current version of the County's comprehensive plan. What about the objectives and tactics adopted by Economic Development Program, have they proven successful or do they need to be refined to reflect national and regional challenges? The answer is some do, and some do not.

Strategic Focus

The three areas depicted below are new or restated objectives which support the economic development goals but are more in tune with the strengths and recent successes of Seminole County. Each objective has distinct strategic actions, 13 in total, which will guide future efforts of the County's economic development program.

ECONOMIC DEVELOPMENT STRATEGY
SEMINOLE COUNTY
2002

Within the strategic plan document, each of the 13 strategic action items has specific tactics and performance measures outlined in detail. Not all items are under the purview of the economic development program but the successful implementation of these items will have a direct impact on the quality of future development in Seminole County. Areas dealing directly with business development through targeting of resources and time have not changed nor has the idea of targeting certain businesses or specific locations within the County. The original list of targeted industries is very broad and should be paired down to those businesses which offer the best opportunity for the type of high end employment Seminole has become known for in recent years. Other opportunities which present themselves, but are not on the list, should be judged on their ability to create “primary” jobs, those jobs which create new wealth in the community. A realistic target business list which is consistent with Enterprise Florida, the Florida High Tech Corridor Council and the Metro Orlando Economic Development Commission is presented below.

**2003 - 2005
TARGET INDUSTRIES
SEMINOLE COUNTY**

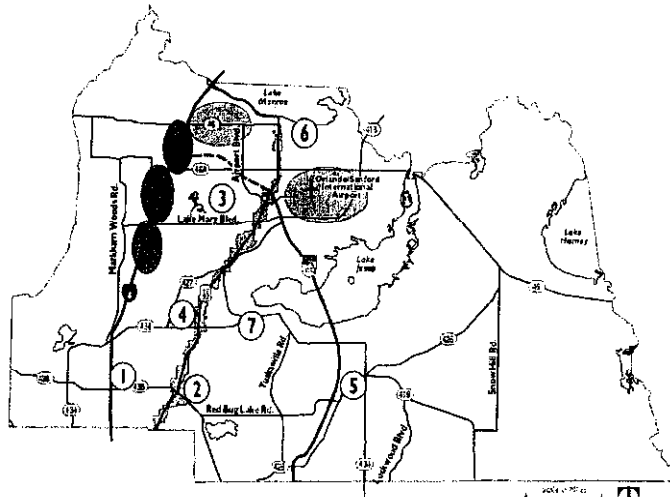

- Research Development and Testing
- Space Technology, Aviation and Aerospace
- Simulation, Modeling and Training
- Laser Technology
- Photonics
- Computer Software
- Computer Hardware
- Medical Labs and Technology
- Communications

Key Locational Targets

The three areas of Seminole County targeted for economic development all have strong business-oriented traits. Each has its own unique set of strengths which support future business development. The key focus areas are:

- Orlando Sanford International Airport (OSIA) – There is almost 160 acres of vacant land available at the Airport with additional vacant lands available in the vicinity. The Airport serves international travelers and recently received Foreign Trade Zone status. OSIA has easy access to major interstates and toll roads and the Lake Mary Blvd extension is near completion.
- US 17/92 Corridor – This corridor is located in the heart of Seminole County and connects to all major road systems within the region. The County has designated the corridor as a Community Redevelopment Area and has a host of programs designed to accommodate redevelopment and new economic development.
- North I-4/Lake Mary – The area includes three interchanges with Interstate 4, access to the Greenway [SR417], infrastructure and available sites for new development. In 2001, there were nearly 1,500 acres of vacant commercial or industrial land.

TARGET AREAS

LEGEND

- | | | |
|--|------------------------------------|---------------------|
| | North I-4 Target Area - High Tech | ① Altamonte Springs |
| | North I-4 Target Area - Industrial | ② Casselberry |
| | Airport Target Area | ③ Lake Mary |
| | US 17/92 Target Area | ④ Longwood |
| | | ⑤ Oviedo |
| | | ⑥ Sanford |
| | | ⑦ Winter Springs |

The biggest success story is the Lake Mary / Interstate 4 area.

- From 1990 to 2000, the assessed property values in this area increased from \$210 million to over \$710 million; that's an average growth rate of over 12 ½ % annually for 10 years.
- The square footage of retail, office and industrial building area in the North I-4/Lake Mary Area grew from 5.2 million square feet to nearly 14.0 million square feet.

Target Area	Property Values (\$ millions)		Building Space (1000's of square feet)	
	1990	2000	1990	2000
North I-4/ Lake Mary	\$210	\$717	5.210	13.934
Airport	34	37	2.104	2.218
US 17/92	128	133	3.191	3.630

Real Estate Research Consultants, Inc.

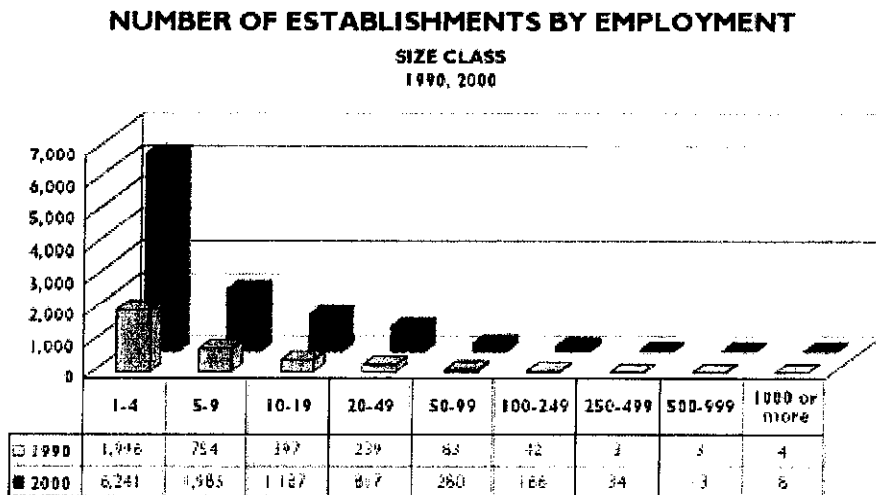

The airport and US 17/92 areas also increased in property value during the same period. Both locations have significant potential for the County if properly nurtured and promoted.

- Orlando Sanford International Airport is relatively new. The major investments in the international and domestic terminals are less than a decade old. Access to the regional highway system (SR 417) is also recent. Momentum in passenger & cargo traffic is building. Infrastructure and land use plans need to continue to evolve to support the potential economic growth of this important County asset.
- The US 17/92 Corridor has been receiving consistent, multi-jurisdictional attention since 1997 with the creation of the US 17-92 Community Redevelopment Agency. Plans for enhancements, design standards and urban infill initiatives will support the continued growth of attractive, safe and economically successful businesses in this central corridor.

The Importance of Small Business

Once the importance of the large employers is acknowledged, it still remains that small businesses are the strength of the Seminole County economy. Small businesses are the source of entrepreneurship; small businesses are the businesses that can foster increased use of technology in general business practices, small businesses sometimes become large businesses, small businesses participate in community activities and small businesses are easier to start than large ones.

In addition, small businesses account for the vast majority of enterprises in Seminole County. In 1990, 1,996 (57%) of the County's 3,518 business establishments employed less than 5 people. In 2000, 6,241 (58%) of the total 10,723 businesses in Seminole County were still in this category. The number of businesses grew over 70%, and they remained predominantly very small enterprises.

Seminole County Economic Factors
TechEcon Research Consultants

The growth and prosperity of small businesses is important to the economy of Seminole County. County support for the programs with Seminole Community College (SCC), the U.S. Small Business Administration (SBA), and the Seminole County Public School system is essential to a healthy small business economy. The SBA in partnership with the County and Seminole Community College has been active in supporting small businesses in Seminole County. The track record amassed by the collaborative effort is impressive and needs to continue to be supported by all the partners. Currently, there are 16 incubator clients in the original buildings and an additional 5 in the Technology Incubator. The STBIC graduated its first company, Brown Technologies and assisted Brown's joint venture with Smart Biometrics, another company assisted by the JGI program. In spite of tough money markets, 26 new businesses were launched through the Seminole County Small Business Assistance efforts in 2002. A formal agreement has been established between STBIC and the UCF Technology Incubator which will result in selected UCF incubator clients being housed at the STBIC.

The economic success enjoyed by Seminole County during the 1990s can be attributed to a multitude of factors. Factors like geography, development of the JGI program, excellent schools and good economic times to name a few. The single factor, however, which set Seminole apart during that period, was leadership and vision from the public and private sectors. The public sector set the agenda for growth and quality of life through a series of strategic infrastructure investments including roads, schools, parks and trails, and streamlining the development process paving the way for private investment.

Seminole County has set a standard in Florida which will be tough to duplicate. As a government we are pro-business and user friendly and we need to tell our story to the world of business. Exhibit A presents a series of goals, objectives, tactics and performance measures which will help Seminole County continue to remain a destination of choice for new and expanding business well into the 21st century.

CONTINUE TO CREATE A GREAT PLACE TO LIVE

Business investment and high wage job growth are attracted to communities that are great places to live.

Objectives	Tactics	Responsibility	Performance Measures
