COMPATIBILITY WITH SURROUNDING PROPERTIES

The area of E. Lake Mary Boulevard is in close proximity to the Orlando/Sanford International Airport and has been assigned the Future Land Use Designation of High Intensity Planned Development – Airport (HIP-AP). The HIP-AP Future Land Use Designation has been implemented to encourage and foster growth for airport support uses such as retail, light industrial, and office. Since the construction of E. Lake Mary Boulevard the relatively large vacant sites along the frontage are an ideal location for these airport support uses. This site is adjacent to a major arterial roadway, within two miles of the SR 417, and within one mile from the entrance to the Orlando/Sanford International Airport. In the recent years this area has been transitioning from agricultural and residential uses to more intense industrial and office uses which are more compatible and consistent with the existing Future Land Use on the property.

This site is surrounded by vacant parcels and single-family homes on 1 acre and larger lots. All the surrounding properties contain the A-1 zoning district and the HIP-AP Future Land Use Designation. Due to the size of this property, its proximity to major thoroughfares, and the Orlando/Sanford International Airport the proposed development of a retail/office/warehouse complex seems consistent with the intent of the HIP-AP Future Land Use. The proposed use of this site allows for a mixture of compatible office, retail, and warehouse uses allowing for the growth of an employment center in a burgeoning area. Staff finds the requested rezone is compatible with the surrounding uses and existing development patterns of the area.

SITE ANALYSIS:

ENVIRONMENTAL IMPACTS

Floodplain Impacts:

Based on FIRM map, with an effective date of 2007, there appears to be no floodplains on the subject property.

Drainage:

The proposed project is located within the Lake Jesup Drainage Basin, and does not have limited downstream capacity. The site will have to be designed to not exceed the pre-development rate of discharge for the 25-year, 24-hour storm event.

Wetland Impacts:

Based on preliminary aerial photo and County wetland map analysis, there appears to be wetlands on the subject property.

Endangered and Threatened Wildlife:

Based on a preliminary analysis, there are not endangered and threatened wildlife on the subject property. A listed species survey will be required prior to final engineering approval.

PUBLIC FACILITY IMPACTS

Rule 9J-5.0055(3)(c); Florida Administrative Code, requires that adequate public facilities and services be available concurrent with the impacts of development. The applicant has submitted an application for Full Concurrency Review. Concurrency Management has determined that water and sewer facility capacity is available for the proposed property subject to execution of a Utility Agreement and payment of fees. Concurrency Management further determined that sufficient roadway capacity is available based upon Concurrency Management System Net Available Capacity.

Utilities:

The site is located in the City of Sanford's utility service area, and will be required to connect to public utilities.

Transportation / Traffic:

The property proposes access onto E. Lake Mary Blvd., which is classified as an arterial roadway currently and is operating at a level-of-service A. E. Lake Mary Boulevard does not have improvements programmed in the County 5-year Capital Improvement Program or FDOT 5-year Work Program.

Multi-Modal Access:

The development will be required to connect a sidewalk from the proposed development to the existing sidewalk along E. Lake Mary Boulevard. The development is also providing bicycle racks as depicted on the preliminary site plan to provide for non motorized access.

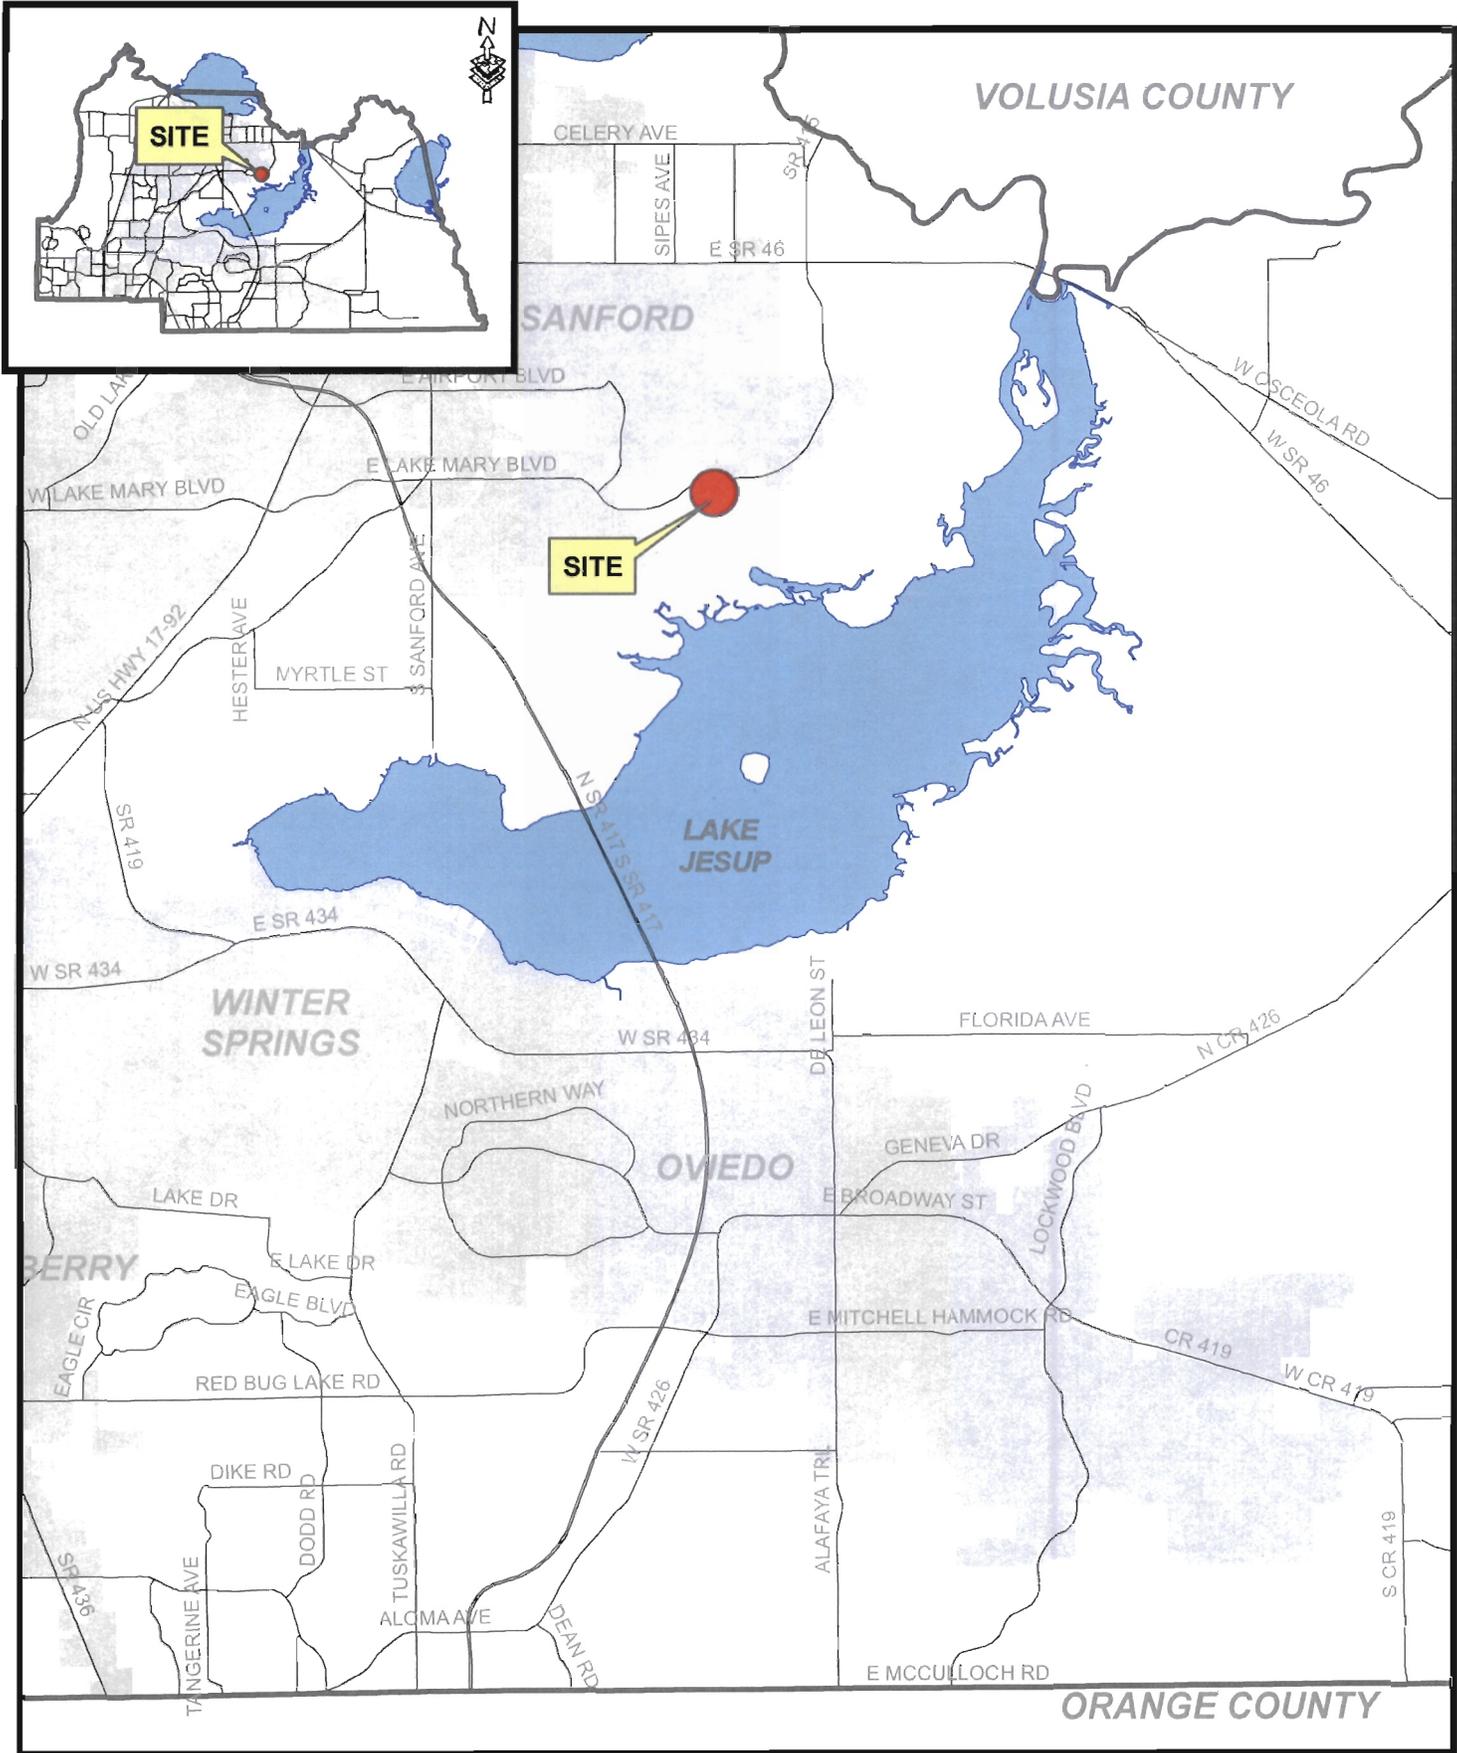

Buffers / Landscaping

The following proposed buffers are contained in the attached Development Order:

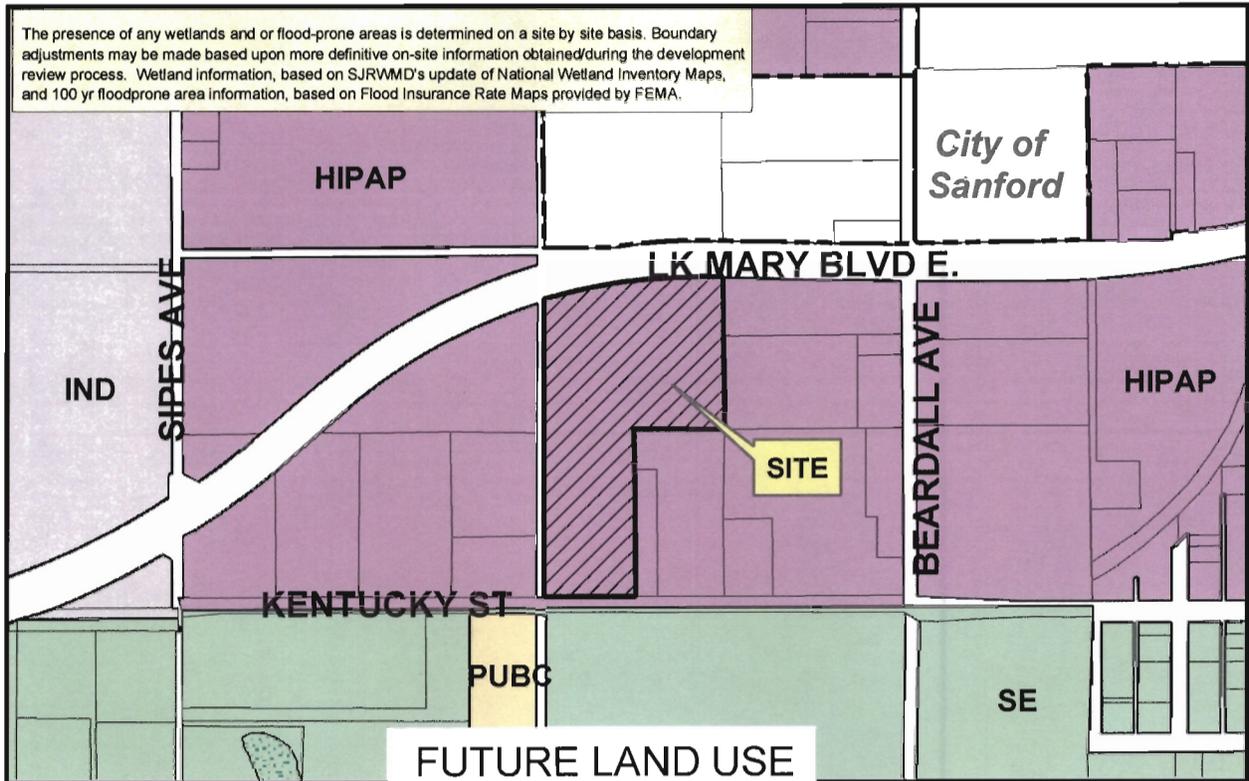

East; 15'
West; 15'
North; 15'
South; 15'

The landscaping that will be contained in the buffer consists of the following;

Buffer	Buffer Width	Length	Total Canopy Trees	Total Understory	Total Shrubs	Structure
West	15'	1062'	24	48	406	3' hedge
North	15'	650'	88	281	N/A	N/A
South	15'	315'	7	14	120	3' hedge
East	15'	910'	24	47	402	3' hedge

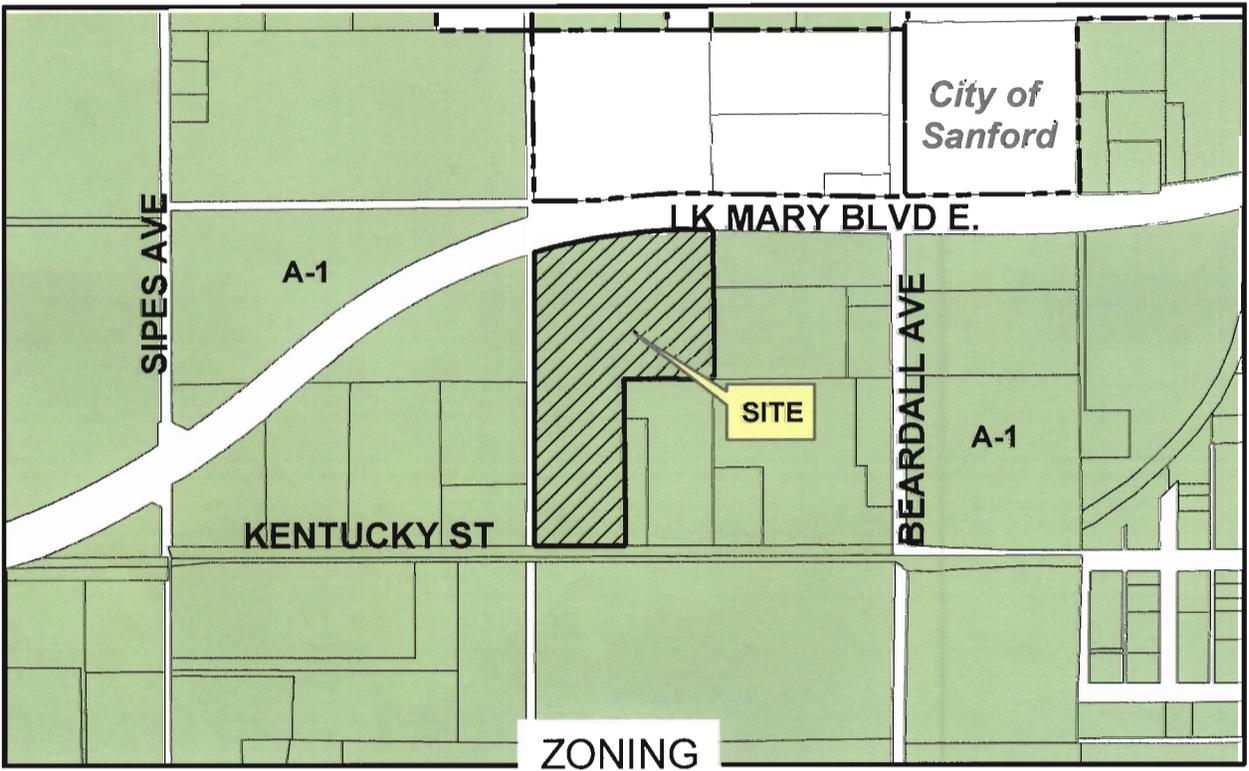

The presence of any wetlands and or flood-prone areas is determined on a site by site basis. Boundary adjustments may be made based upon more definitive on-site information obtained during the development review process. Wetland information, based on SJRWMD's update of National Wetland Inventory Maps, and 100 yr floodprone area information, based on Flood Insurance Rate Maps provided by FEMA.
